

Objectives

The objective of the Plurimi Growth strategy is to achieve long-term capital appreciation through investments primarily in global stocks. The strategy is a flexible and seeks to maximise returns vs. a composite 70% MSCI World, 15% ICE US Treasury 7-10Y bonds and 15% iBoxx USD Liquid IG corporate bonds benchmark by employing active bottom-up stock selection, and tactical allocations across regions, styles and other asset classes.

Risk and return targets

- Typical beta vs. MSCI World: 0.8
- Beta range: 0.5-1.0
- Return target: Composite benchmark +2% per annum.

Key points

Stock selection driven by independent research and proprietary selection models.

Top-down regional and style allocations.

More than 50% invested in equities, with flexibility to allocate to cash, commodities, fixed income and structured notes.

Key risks

Capital is at risk. The strategy has a flexible asset allocation policy, which means allocations to risky assets are not fixed and may be increased at the portfolio managers discretion. More than half of the exposure is allocated to equities. The strategy invests globally and takes currency exposure which also can create capital losses. The strategy is diversified but Individual stock and corporate bond risk may be significant with positions up to 4 and 9% respectively.

Commentary

The strategy fell by 1.7% during the month, beating its composite benchmark which fell by 4.1%.

The strategy's energy and agribusiness holdings were the largest contributors in August. **Corteva, Archer Daniels Midland, Deere and Mosaic** all rose by more than 5%. Climate change leading to droughts in some areas and floods in other areas is impacting farming yields. Russia's invasion of Ukraine is also dramatically impacting grains distribution and potash exports. We expect this to lead to higher agricultural prices and more money being spent on farming equipment, pesticides and fertilizers. Global fertilizer-market tightness should extend into 1H23, we believe, keeping prices elevated despite a wide divergence in consensus that highlights the potential for declines. A prolonged supply crunch for natural gas and therefore nitrogen, which farmers can't skip, may give fertilizer producers a prolonged boost. **Corteva's** strong new products, and cuts to legacy royalty costs should lead to earnings growth. A highly volatile commodity environment for farmers enhances the value of Corteva's uniquely direct sales approach. Though cost risks are widespread and may threaten farmers' short-term purchasing strength, Corteva is financially strong and bolstering its margin of safety with restructuring steps to cut costs. **ADM** is strategically positioned to benefit from new businesses to capture future trends, which may drive its profit growth for years to come. Renewable jet fuel, plant protein and nutrition are some of its growth drivers for the next decade. The company may also be well-positioned to gain from the U.S. government's climate-change initiatives over the next three years.

ASML fell by 14%. The global chip shortage has may be ending but ASML's sales growth may continue into 2023 due to strong underlying demand for lithography tools and a delay of sales recognition from 2022 to 2023. Demand from advanced-chip customers, including TSMC, Samsung and Intel, which are aggressively investing in 7- to 3-nanometer technologies, may rise. ASML's next-generation extreme ultraviolet (EUV) lithography tools could have higher selling prices, boosting its operating profit. The market for EUV is strong as it makes the most advanced chips, where ASML has a 100% market share.

The strategy's fixed income holdings fell by 5% in August. The **SPDR Emerging Inflation Linked Bond ETF** rose by 4%, benefitting from a higher carry and EM currency strength during the month. This was offset by a selloff in the **WT Coco ETF** as spreads on non-investment grade debt widened significantly.

Central banks have threatened to create a difficult environment for both equities and bonds as we enter the final four months of 2022. Fed chairman Jerome Powell seems to have acknowledged the hoped for "soft landing" of the US economy is unattainable. He may still avoid an outright US recession but his goal now seems to be to grind inflation down by slowing growth below its potential for an extended period...or the contradictory term of a "growth recession." The ECB is also likely to hike more aggressively than we expected a last month. Power prices across Europe recently hit all-time highs amid fears of a Russian energy cut-off this winter. Soaring energy prices have fed into euro-area inflation at a record high, bolstering the possibility the ECB hiking by 75bps in early September. We expect the Bank of England will also continue to hike rates despite a very weak growth environment.
