

Objectives

The objective of the Plurimi Cautious Strategy is to achieve long-term capital appreciation primarily through investments in a portfolio of global stocks and bonds. Tactically the strategy may also include exposure to commodities, real estate, and other alternative asset classes. The strategy is flexible and seeks to preserve capital on a 12-month basis and deliver a total return of inflation +2% per annum over a market cycle. Performance is compared to a composite index made up of 35% MSCI World, 32.5% Iboxx Investment Grade, and 32.5% 7-10 year US Treasury Index.

Risk and return targets

- Return target: CPI +2% per annum.
- Typical beta vs MSCI World: 0.4-0.6

Key points

Defensive strategy designed to protect capital in the short term and grow purchasing power over a cycle.

Objective stock selection process utilises independent research and proprietary screens.

Top-down regional, asset class and style allocations to enhance returns and mitigate macro risks.

Portfolio characteristics skewed towards value, quality, and yield.

Key risks

Capital is at risk. The strategy has a flexible asset allocation policy, which means allocations to risky assets are not fixed and may be increased at the portfolio managers discretion. The strategy invests globally and takes currency exposure which also can create capital losses. The strategy is diversified but individual stock and corporate bond risk may be significant with positions up to 4 and 9% respectively.

Commentary

The strategy fell by 0.4% in August, beating its composite benchmark which fell by 1.4%.

The strategy's equities delivered a positive performance despite a falling market. Novo Nordisk was the strategy's best performer in August. The stock rallied by 15% on positive trials results for weight loss drug Ozempic. Its use reduced symptoms of heart failure in obese patients in a first-of-its-kind clinical trial. Scientists are investigating more future applications for the drug beyond its current usage. It has prospects to be used as an insurable health related drug, expanding its use beyond vanity. Centrica rose by 8%. Centrica, the owner of British Gas, announced it will increase returns to shareholders after it benefited from record profits in its UK energy retail supply business in the first half of the year. It increased its dividend by 33% and doubled its share buyback program. Visa rose by 5%. Visa and Mastercard Inc. are planning to boost the fees that many retailers pay when accepting customers' credit and debit cards. The additional Visa charges are slated to begin in October for online transactions, followed in April by new fees for commercial credit, debit and prepaid cards. We sold KDDI which brought the equity exposure to 32%. ASML was a large detractor, falling 8%. Technology stocks generally fell on higher interest rates during the month. We remain comfortable with the position, as it is the market leader in photolithography, which is an integral part of chip manufacturing. Demand for chips on increasing AI investment should drive revenue growth for the company. Citigroup fell 12%, lagging the 7% bank index return.

The strategy's shorter duration stance in fixed income delivered flat returns, despite the fall in broader bond markets. We increased the weight in the iShares Core USD Corporate bond etf during the month on improving yields.

In the final four months of 2023 we expect one 25bp hike from the ECB and 50bp of hikes from the BoE. Fed Chair Jerome Powell's Jackson Hole speech at the end of August was mildly hawkish. He made no mention of needing to lower interest rates in the future. He said that the policy options were either high-for-longer or higher-for-longer interest rates. Despite this relative hawkish stance, we expect the US Federal Reserve is now done hiking interest rates.
